

ABSTRACT

Topic: Eye Care Management System

Project Nature: Mini Project Extension

Completion Level: Completion 60% of Mini Project

The Eye Care Management System is a web based application which manages all the functionalities of an Eye Clinic. The Existing system works manually. This Proposed system can be used to search for the availability of doctors. The proposed system is useful to manage the Eye Clinic and Patients for online Appointments. The system reduces lot of workload for patients as well as Doctors. By this system the patients can book appointments according to the doctors availability. There are three types of users in this system, Doctors, Admin, Patients. The admin can add Doctors, manage Patients etc.

Module Description

Admin

In this administration of whole Eye Clinic is to be done. Admin manages following things:
